VERSION CONTROL SYSTEM - GIT

WHAT IS GIT?

WATCH THIS SHORT VIDEO BEFORE YOU [START](#)

- Version Control System (VCS) are used for tracking changes in source code files
 - Distributed version control
 - Coordinates work between multiple developers/ testers
 - Who made what changes and when
 - Revert back at any time
 - Local and Remote - DevOps
 - Keeps track of code history
 - Takes snapshot of your files
 - You decide when to commit your changes
 - You can visit code change anytime
 - You stage files before committing
