Test Analyst Job Ready Programme

Agenda

Week 1

➤ Day 1

- ~~Being a Software Tester~~
- ~~What is Software~~
- ~~Environments~~
- ~~Server / Cloud Based Server~~
- ~~Use Cases / Test Cases~~
- Tasks

➤ Day 2

- Test Scenarios
- Software Development Lifecycle (SDLC)
- Software Test Lifecycle (STLC)
- Resource Plan
- How to Log a Bug?
- Defect Management
- Tasks

➤ Day 3

- Test Types
 - Functional Tests
 - Non-Functional Tests
- Tasks

Test Scenarios

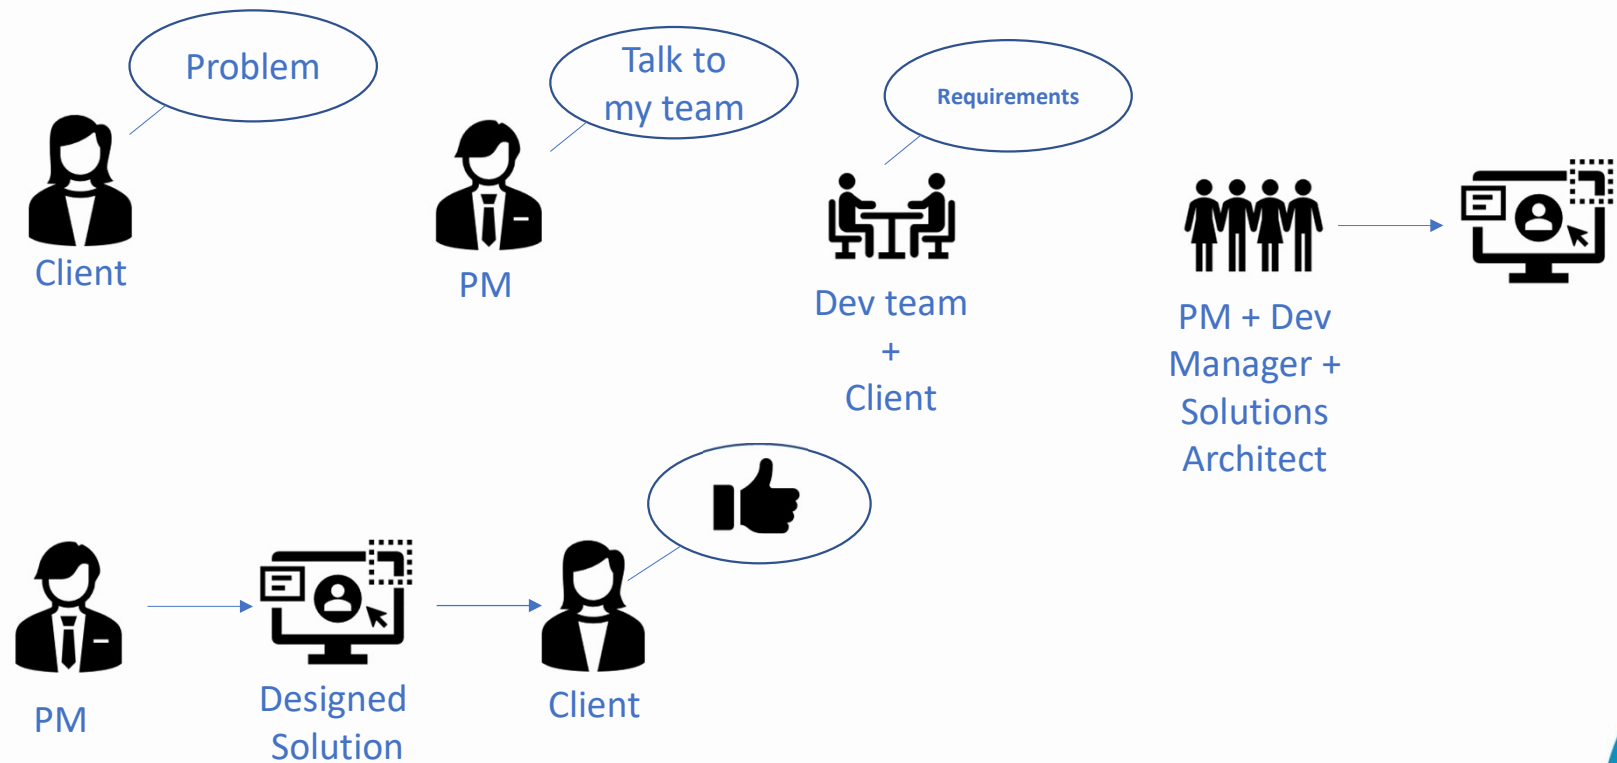

Source: canva.com

- Test Scenario is a collection of Test Cases.
- They establish a Condition.
- They group the Test Cases that are related to each other

		Use Cases 1. Existing user trying to login with valid credentials 2. New user trying to register to TurnUp Portal 3. Existing user trying to login with invalid credentials 4. Existing user trying to access another user's account 5. Existing user trying to reset password 6. Existing and new user trying to access TurnUp Portal from iOS, Android and Windows devices on different browser combinations 7. Existing user clicking on remember me checkbox to remember their credentials
Test Scenario	Test Scenarios	Test Cases
TS_001	Validate if a new or existing user is able to login to TurnUp portal with valid credentials	Check if an existing user is able to login to TurnUp portal with valid username and password Check if user is taken to home page if logged in successfully Check if a new user is able to register to TurnUp portal using the register functionality Check if a new user is able to perform the login after successfully register to TurnUp portal
TS_002	Validate if an existing user is not allowed to login or register with invalid credentials	Check if an existing user is not allowed to login to TurnUp portal with valid username and invalid password Check if an existing user is not allowed to login to TurnUp portal with invalid username and valid password Check if an existing user is not allowed to login to TurnUp portal with invalid username and invalid password Check if an existing user is not allowed to login to TurnUp portal with null username and valid password Check if an existing user is not allowed to login to TurnUp portal with valid username and null password Check if an existing user is not allowed to login to TurnUp portal with null username and null password Check if an existing user is not allowed to login to TurnUp portal with null username and invalid password Check if an existing user is not allowed to login to TurnUp portal with invalid username and null password Check if users are not allowed to see other user's homepage upon login Check if a new user is not allowed to register with an existing username
TS_003	Validate the UI and UX components on the TurnUp portal login page	Check if a new and existing user are able to access TurnUp portal from iOS Safari browser Check if a new and existing user are able to access TurnUp portal from Android Chrome browser Check if a new and existing user are able to access TurnUp portal from Android Firefox browser Check if a new and existing user are able to access TurnUp portal from Windows Edge browser Check if a new and existing user are able to access TurnUp portal from Windows Chrome browser
TS_004	Validate reset password and remember me functionalities on the login page	Check if an existing user is allowed to reset password using the reset password functionality Check if a new user is not allowed to reset password using the reset password functionality Check if an existing user is not allowed to reset another user's password Check if an existing user is not allowed to reset password, choosing a password that has already been used Check if an existing user logging in with the remember me checkbox ticked doesn't have to provide credentials the next time Check if invalid credentials are not remembered when user performs a fail login attempt

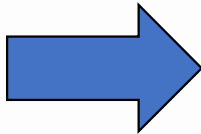

Software Development Lifecycle (SDLC)

Software Development Lifecycle (SDLC)

PM

→ Development = 6 months

→ Test = 3 months

→ Infrastructure set up = 1 month

→ Deployment = 1 month

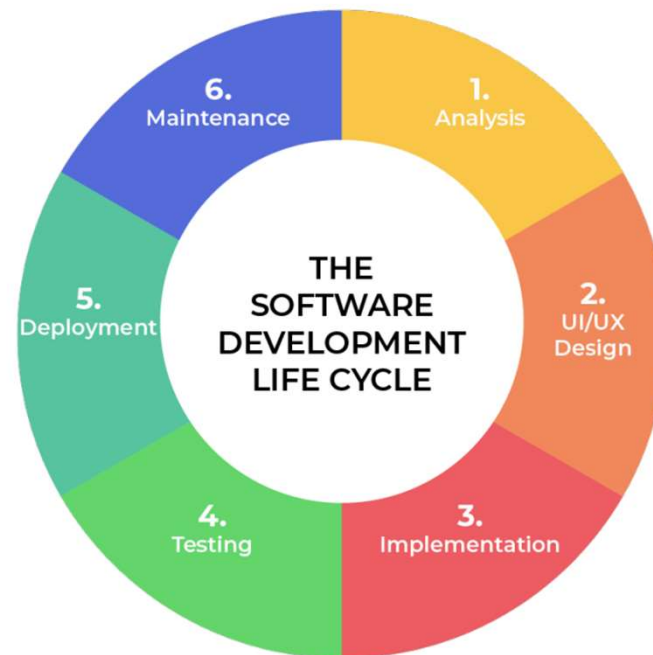

→ Customer Service

→ Dev / Test team

→ Fix / re-deploy

Software Development Lifecycle (SDLC)

1. Requirement Analysis
2. Design
3. Building or Development
4. Testing
5. Deployment
6. Maintenance

Software Test Lifecycle (STLC)

Requirement Analysis

Test Planning

Test Design

Test Execution

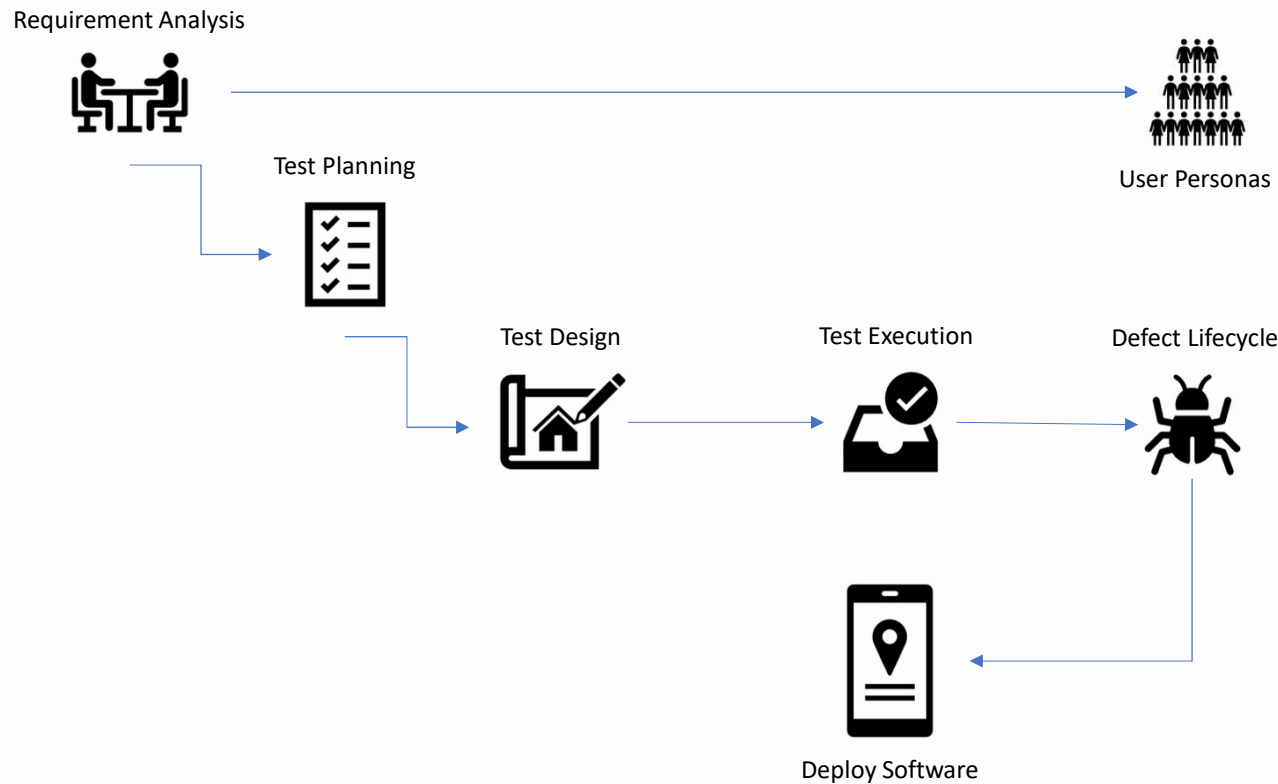

Defect Lifecycle

Deploy Software

User Personas

Software Test Lifecycle (STLC)

Software Development Lifecycle

1. Requirement Analysis

2. Test Planning

Test Design

4. Test Execution

5. Defect Lifecycle

6. Deployment

1. Requirement Analysis

2. Design

3. Building or Development

4. Testing

5. Deployment

6. Maintenance

Resource Plan

- Strategy that allocates resources into projects
- Ensures resources are available at the right time
- Resources used efficiently
- Timelines, milestones, deadlines.

What is a Bug?

- Bug
- Defect
- Issue

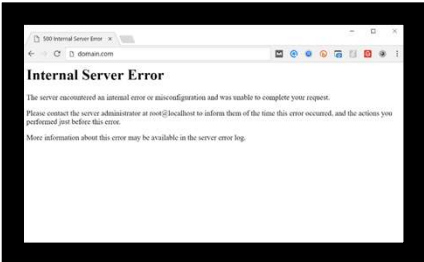

Production

While functionality
is being built

How to Log a Bug?

Defect ID	Summary	Description	Severity	Priority	Environment	Assigned to	Status	Attachments
Bug_001	User is unable to login to TurnUp portal with valid credentials	Steps to reproduce: 1. Launch TurnUp portal 2. Input Username 3. Input Password 4. Click on Login button Expected Result: user should be able to login successfully. Actual Result: user is unable to login successfully. 500 Internal Server Error page is displayed. Test Data: Username: hari Password: 123123 Url: https://horse.industryconnect.io	High	High	Test	John Doe	Open	

New/Open > Assigned To > In Progress > Ready for Retest > Done/Closed

Defect Management

Finding Bugs

PREVENTING Bugs

- Share information
 - Communicate with the development team
 - Test Driven Development
-
- Execute automated tests that check existing functionalities prior to testing a new functionality.

Tasks – Day 2

1. Blog posts:
 - Explain SDLC with an example
 - What happens in the Requirement Analysis phase in SDLC
 - Explain STLC with an Example
 - How do you log a Bug?
 - How do you prioritize defects?
 - What is the difference between Use and Test Case?
 - What is the difference between Test Case and Test Scenario?
2. Write Test Scenarios and Cases for Time and Material Module.
