DevOps

DevOps

Waterfall

Agile - Artifacts

User Story (instead of requirements doc.)

Product Backlog

Login – Facebook

As a new user

I would like to use my email address

So I can connect with my friends

Epic – Login page

US 1: New user registration

US 2: Existing user login

US 3: Forgot Password

Tasks

- Build the front end
- Build the back end
- Build the database
- Build automated tests

Agile - Roles

Project Manager – oversee the whole process.

Developer

Product Owner – prioritize the team backlog.

Tester

Business Analyst – bridge between IT and the business.

Agile - Ceremonies

Sprint – user stories to be done in a short period of time.

Retrospective – ice breaker, what was good, what was bad, improvements.

Refinement – select US from backlog to be refined. Happens before the start of a sprint.

Stand-up – daily 15 minute meeting.

Sprint Planning – BA brings US's that have been refined and it's decided which ones will be worked on.

Review – last day or two of the sprint. Someone from the team demo what has been developed in the sprint.

Agile - Benefits

BENEFITS OF AGILE METHODOLOGY

9 Key Benefits of Using the Agile Methodology

- Small chunks of functionalities | Deliver in less time
- Sprints and techniques that improve predictability
- Project transparency | Project is adaptable
- Retrospective | Continuous Delivery

Tasks – Day 4

- Blog posts:
 - What is CI, CD and CT?
 - What are the benefits in following DevOps practices?
 - What is the purpose of GitHub?
 - What are the drawbacks in waterfall software development model?
 - What are the different roles in an agile scrum team?
 - What are the different ceremonies in an agile scrum team?
