Test Analyst Job Ready Programme

Agenda

Week 3

➤ Day 1

- ~~Test automation~~
- ~~Synchronization issues~~
 - ~~Thread.Sleep()~~

➤ Day 2

- Design Patterns – What is it?
- Page Object Model implementation
- Wait Implementation
 - Implicit
 - Explicit
 - Fluent

➤ Day 3

- Unit Test Implementation
- Introduction to Inheritance
- NUnit assertions
- Exception handling

Design Patterns

Pros

- Code Structure
- Facilitate collaboration

Types

- Page Object Module
- Modular Approach
- Data Driven Approach
- Test Driven Approach
- Behavior Driven Development
- Locator Strategies
- Hybrid

WebDriver Wait

Implicit Wait	Explicit Wait
Implicit Wait time is applied to all the elements in the script	Explicit Wait time is applied only to those elements which are intended by us
In Implicit Wait, we need not specify “ExpectedConditions” on the element to be located	In Explicit Wait, we need to specify “ExpectedConditions” on the element to be located
It is recommended to use when the elements are located with the time frame specified in Selenium implicit wait	It is recommended to use when the elements are taking long time to load and also for verifying the property of the element like(visibilityOfElementLocated, elementToBeClickable,elementToBeSelected)
